

Supplemental Figures

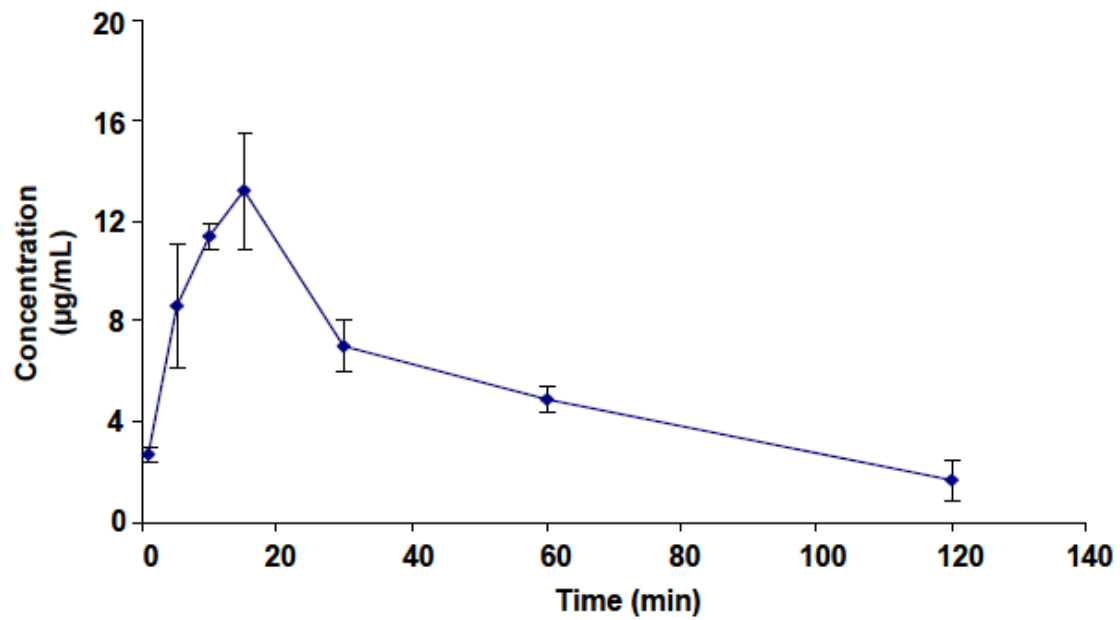

A

B

Supplemental Figure 1. A. Examples of TTC-stained sections from mice in the indicated experimental groups. Vehicle was administered 30 min post-stroke. Pregabalin (10 mg/kg) was administered at the indicated time points prior to (pre) or after (post) stroke. B. Examples of TUNEL-stained sections showing the striatum in mice in the different experimental groups.

Supplemental Figure 2. Pregabalin (10 mg/kg) was injected into the peritoneal cavity, and concentrations of pregabalin in plasma samples was measured at the indicated time points. Values are the mean and SD (n = 4 mice for each time point).
